

CARBONATE GULCH ABANDONED MINE RECLAMATION PROJECT

SPECTRUM ENGINEERING

Utah

Project Description

Transcon Environmental, working as a subcontractor to Spectrum Engineering, evaluated the historic value of 53 mine openings in the project area prior to being closed by the Department of Oil, Gas and Mining under the Abandoned Mine Reclamation Program. Based on cultural resources identified in the field, Transcon wrote a Class III Cultural Resource Report. The report recommended eligibility of the sites as well as agreeing with or suggesting different methods of closure to preserve significant cultural resources.

Transcon biologists conducted bat surveys of the mine openings and recommended closure methods based on the results of their surveys.

Agency Coordination

Bureau of Land Management, Utah State Lands, Utah State Historic Preservation Office, and private land holders.
